WHAT I DO

How I Can Help

I specialise in building smart, scalable solutions at the intersection of AI and web development.

01

AI & Automation

Building intelligent agents, chatbots, and automated workflows using LangChain, Google Gemini, and n8n — turning complex processes into smooth, hands-free pipelines.

See AI Projects →

02

Logistics Operations

Bridging logistics operations with modern information systems to streamline transportation, warehouse workflows, inventory visibility, and operational decision-making using data analytics, automation, enterprise systems, and process optimization.

See Web Projects →

03

Data & Machine Learning

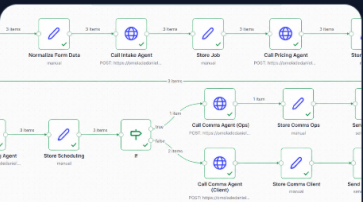

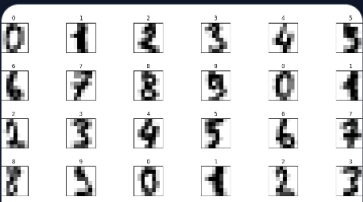

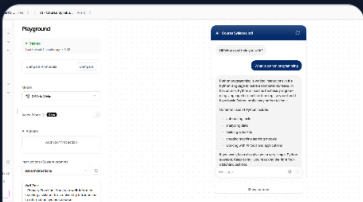

Turning raw data into actionable insight — predictive models, data pipelines, and visualisations that help make better decisions faster.
